Project Design Phase-II

Technology Stack (Architecture & Stack)

Technical Architecture:

The Deliverable shall include the architectural diagram as below and the information as per thetable1 & table 2

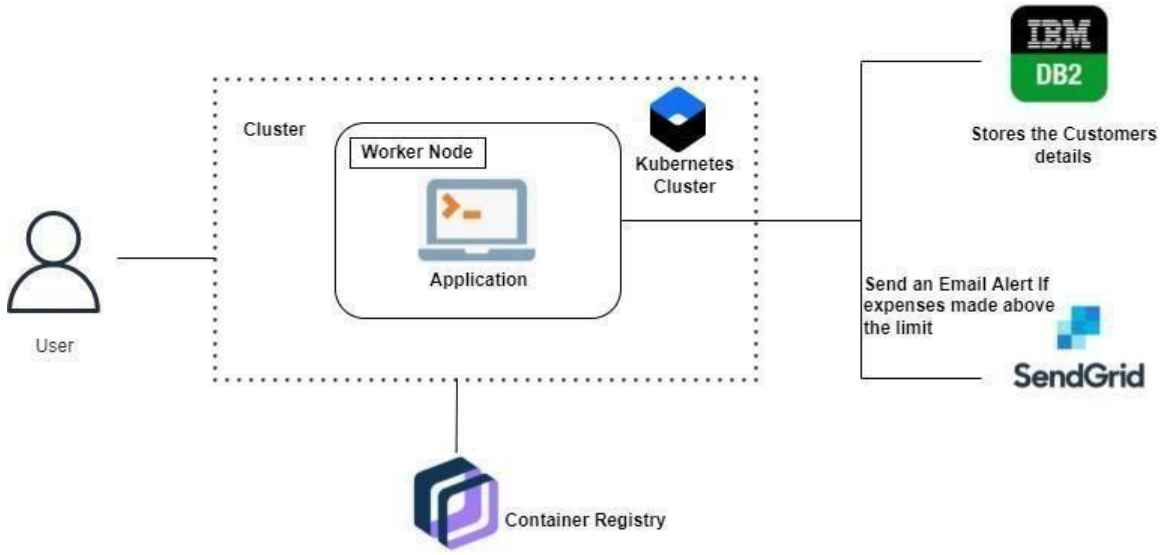

Table 1 : Components & Technologies:

S.No	Component	Description	Technology
1.	User Interface	The user can interact with the application with the use of a Chatbot.	HTML, CSS, JavaScript / Angular Js / React Js etc.
2.	Application Logic-1	The application contains the sign-in/sign-up where the user will log in to the main dashboard.	Java / Python
3.	Application Logic-2	The dashboard contains the fields like Add income, Add Expenses, and Save Money.	IBM Watson STT service
4.	Application Logic-3	The user will get the expense report in graph form and also get alerts if the expense limit exceeds.	IBM Watson Assistant
5.	Database	The Income and Expense data arestored in the MySQL database.	MySQL, NoSQL, etc.

6.	Cloud Database	With the use of Database Service on the Cloud, the Userdata are stored in a well-secured Manner.	IBM DB2, IBM Cloudant etc.
7.	File Storage	IBM Block Storage is used to store the Financial data of the user.	IBM Block Storage or Other Storage Service or Local Files System
8.	External API-1	It exposes a business's internal resources to outside users or applications.	IBM Weather API, etc.

Table 2: Application Characteristics:

S.No	Characteristics	Description	Technology
1.	Open-Source Frameworks	Flask Framework in Python is used to implement this Application.	Python-Flask
2.	Security Implementations	This Application Provides high security to the user's Financial data. It can be done by using theContainer Registry in the IBM cloud.	Container Registry, Kubernetes Cluster
3.	Scalable Architecture	Expense Tracker is a lifetime access application. Its demand will increase when the user's income is high.	Container Registry, Kubernetes Cluster
4.	Availability	This application will be available to the user at any part of time.	container Registry, Kubernetes Cluster
5.	Performance	The performance will be high because there will be no network traffics in the application.	Kubernetes Cluster
